Relationship to the Strategic Plan / Health Impact Assessment

This report refers to operational matters.

Report Summary

This report provides a high-level overview of the 2018 Municipal and School Board Election.

Financial Implications

There are no financial implications associated with with report.
All costs of the 2018 Municipal and School Board Election are funded from the Election Expenses Reserve Fund.

Background

The purpose of this report is to review the City of Greater Sudbury's experience with the 2018 Municipal and School Board Election and to describe next steps towards planning the 2022 Election.

The 2018 Municipal and School Board Election was the City's first fully electronic election building on the successful use of electronic voting during the advance vote for the 2014 election. The *Municipal Elections Act*, 1996 (the "Act") directs that municipal elections are the responsibility of municipal clerks.

Municipal elections require extensive resources and planning. While the preparations and choices about managing the election process are similar across the province, each community designs its own plan according to the Clerk's best judgment. Nevertheless, the level of collaboration between municipal clerks throughout the process of preparing for an election is quite high.

In Sudbury, the process is led by a small staff team from the Clerk's Section (the "Election Team"). The Election Team also included staff leads from other areas essential to the delivery of the municipal election such as Communications and Information Technology. Preparations for the next election are continually being made throughout the term of Council; however, they are much more involved in the year prior to the election.

The Election Team started meeting weekly early in the third quarter of 2017 to coordinate, plan and ensure completion of all aspects of the Election Workplan which included significant work with the vendor selected to provide the electronic voting technology. Dominion Voting Systems (Dominion), selected through a comprehensive procurement process, was a reputable and established vendor of voting systems with experience conducting elections throughout Canada and the United States.

On Election Day, the City and 51 other municipalities that also contracted with Dominion for electronic voting experienced a significant slowdown of Dominion's voting platform. This led to many electors being unable to cast their ballots between the hours of 5:30 p.m. and 8:00 p.m. in communities across Ontario.

As described in more detail in this report, staff responded to this unacceptable result with a decision to extend the voting period. This reflects the guidance provided by the Act and allowed electors impacted by the slowdown an opportunity to cast their ballots.

This failure was unfortunate for the electors of Greater Sudbury and the many other affected communities throughout Ontario, the election candidates and the City staff who worked so hard to plan, deliver and assist with the 2018 Municipal and School Board Election. In conducting a debrief of the election process, staff identified several issues that should inform decisions regarding future municipal and school board elections:

- Voters' List;
- Communication and Voter Engagement;
- Electronic Voting System/Service Provider;
- Voting Period and Locations; and
- Voter Experience.

Voters' List

Overview

Issues regarding omissions, duplicates or incorrect voter information are common and historic challenges that every election faces, whether that election be held at the municipal, provincial or federal level. While the ideal situation would be an error free voters' list, the fact that the list contains errors is not insurmountable and many processes are available, in accordance with the legislation, to voters both before and during the election to make corrections and add persons to the list. Staff recognize that it is important to encourage residents to verify their information in advance as that will result in less Voter Information Letters being mailed to incorrect addresses as well as less changes to information being required during the voting period.

MPAC

As per the provisions of the Act, voters' lists for all Ontario municipal elections are generated and provided to municipalities by the Municipal Property Assessment Corporation (MPAC). MPAC's voters' list information is generated through a combination of: responses to enumeration forms that are sent to property owners, information from real estate transactions and property owners contacting MPAC directly or using the MPAC voter look-up tool to make changes to their information.

In the spring of 2018, the City of Greater Sudbury made the MPAC voter look-up tool available to voters on the City of Greater Sudbury's election website and conducted an extensive advertising campaign to encourage voters to use the tool to ensure that they were on the voters' list and that their information on the list was correct and up to date. Approximately 3,100 residents in the City of Greater Sudbury used the MPAC voter look-up tool to verify and correct their information.

Preliminary Voters' List

The preliminary list of electors is provided to the municipality in late July of an election year, at which time the Clerk is permitted to correct any obvious errors. With the use of software to manage the voters' list, staff review the information on the voters' list that has been flagged for attention such as: potential duplicates, invalid roll numbers, incorrect mailing addresses and name anomalies. Staff review all flagged items and make the appropriate corrections where possible. It should be noted that for the 2018 election the voters' list management software flagged significantly fewer issues than in past elections.

Revision Period for Electors

The official voters' list revision period commenced on September 1, 2018 and staff sought to make the process to confirm and revise information on the list as convenient as possible for electors. To that end, persons were able to use the City's "Am I on the Voters' List" tool to ensure that they were on the voters' list and that their information was correct. This tool was communicated to the public through various advertisements, press releases and social media and was accessed approximately 5,400 times by persons to verify information on the voters' list.

During the revision period, persons could correct their information or have their name added to the voters' list by attending Clerk's Services (Tom Davies Square, 2nd Floor) or a Citizen Service Centre/Library throughout the City during regular business hours from September 1 to

October 21, 2018 and until the close of voting on Election Day at any one of the City's Election Day voting locations. Voters who required changes to their voter information were required to complete an Application to Amend the Voters' List form. Once the application form was completed, the voter signed the form and presented an acceptable form of identification in order to verify their identity.

Voter Information Letters were sent to voters in mid-September to those voters found on the voters' list. These letters contained important information for the intended voter such as their online voting credentials, how to cast their online ballot, the different in-person voting location options available and voter eligibility. As indicated above, if an elector's name did not appear on the voters' list, he or she would not have received a Voter Information Letter. Numerous communications through different media channels and social media encouraged persons to attend a variety of City of Greater Sudbury locations as of September 1 to correct their information on the list where required. Approximately 3,700 changes to the voters' list were made by electors attending Tom Davies Square or Citizen Service Centres and Libraries during the period from September 1 to the commencement of the voting period.

In terms of revisions that were required to be made to voters' list information overall, in 2018 there were a total of 20,132 changes made compared to 34,859 changes made in 2014. This represents a 17.38% change of the list in 2018 compared with a change percentage of 29.61% in 2014.

Communication and Voter Engagement

Overview

A key focus during the 2018 Municipal and School Board Election was communication to and engagement of Greater Sudbury voters. Following the 2014 Election, the decision was made to direct more efforts towards both informing and engaging voters.

As this was the first time that City of Greater Sudbury conducted an electronic election, it was important to ensure that residents were aware that voting for the election was going to be conducted electronically, even at in-person voting locations. Staff also wanted to instill confidence and comfort amongst voters regarding the use of the online voting platform.

Communications Plan

An Election Communications Plan was developed for this election which contained various strategies for disseminating election information to the public. A greater focus was put on the type of information that was being communicated out to the public and ensuring that it was communicated across a wide range of channels. The bulk of election related information for both candidates and voters was housed on the City of Greater Sudbury's election website: www.greatersudbury.ca/election and was updated accordingly as new information became available.

Additional election information regarding where, when, and how to vote electronically was communicated through newspapers, radio, social media, billboards, Silver City advertisements and Public Service Announcements (PSAs). Posters with this information were sent to City Libraries and Citizen Service Centres and Nursing and Long-Term Care Homes. Pamphlets

were also sent to all eligible electors' homes, which contained additional information on how to make amendments to elector information on the voters' list.

3-1-1

The role and importance of 3-1-1 was also increased in this election as they became the first point of contact for all calls related to the election and were provided with FAQs and scripts so that often times they were able to resolve the caller's question or issue without having to transfer the call out. 3-1-1 extended service hours throughout the revisions and voting period so as to be on hand to field any election or voting related issues or calls. This proved to be an invaluable resource addition to the election. In addition to being able to call 3-1-1 for election related inquiries, residents and voters were also able to call Clerk's Services directly or send an email to the election inbox. All emails sent to the election inbox were responded to on the same day, including evenings and weekend and typically within hours of receipt.

Outreach Initiatives

During the lead up to the opening of the voting period, a greater focus was also placed on the outreach aspect of the communication plan with information and outreach sessions being held for various groups prior to voting day. Community Action Network meetings and Nursing and Long-Term Cares Homes were attended by Election Officials to present key information regarding the 2018 Municipal and School Board Election and showcase accessible voting technology. Election outreach and registration days were also held at all of the City's universities and colleges and a Sudbury Wolves' hockey game.

In addition to information being provided to voters during these outreach initiatives, attendees were given the opportunity to check with staff to see if they were on the voters' list and if their information on the list was correct. If it was found that they were not on the list or that their information was incorrect, staff would complete the Application to Amend the Voters' List Form and process and the voter's information would be updated.

While these sessions were advertised and communicated in advance to the various groups and organizations, the majority of the outreach activities and presentations were not well attended.

Communications with Candidates

In addition to a modernized strategy for communicating with electors, the Election Team implemented numerous new measures for communicating more efficiently with election candidates. From the moment persons registered to become candidates in the 2018 Municipal and School Board Election, access was provided to a great deal of relevant information regarding all aspects of the election process via a modernized election website. An election portal was further used to provide rapid email communications to all registered candidates. This was particularly useful on election night when the Election Team provided notification to all candidates of the decision to extend the voting period. Candidates were also provided with electronic access to forms and document as well as the voters' list, which list was being electronically updated in real time as changes were made by election officials and as electors cast their ballots.

Electronic Voting System / Provider

Voting Method

In May of 2017, a report was brought forward to City Council requesting approval of a staff recommendation for the use of an online voting platform for the entirety of the 2018 Municipal and School Board Election voting period. The report outlined the concerns of staff regarding the receipt and evaluation of responses to the initial Request for Proposal (RFP) for a combined voting method (paper ballot/internet). Concerns included: the cost of the equipment required to run the paper ballot portion of the election, omission of important information, compliance with legislation and experience.

The use of electronic voting as the sole method of vote was approved for use during the entire voting period of the 2018 Municipal and School Board Election by City Council.

Vendor Selection

In compliance with the City of Greater Sudbury's Purchasing By-law, a second RFP was issued and submissions were received from four vendors. Submissions were evaluated by the evaluation committee on a number of predetermined criteria including: functionality requirements, technical capabilities of solution, experience and references, vendor support and price.

Following the conclusion of the scoring, the proposal was awarded to Dominion being the vendor whose submission received the highest evaluation score. The submission from Dominion was comprehensive and demonstrated extensive experience in delivering electronic voting technology. Following the award of the contract to Dominion, the Election Team, including key staff from the Information Technology Section worked with the vendor's project lead to implement all required elements of the voting solution. The system was available to the Election Team in a test environment which was of great assistance in training the many election officials required.

Testing

The Election Team verified and checked the election data populated in the system numerous times to ensure that all candidates were properly reflected as running for the offices for which they registered. The Election Team then conducted a series of test votes to confirm that the platform was functioning as required and that votes would be recorded as cast.

Consistent with practices in prior elections, KPMG LLP was retained by the City to oversee testing of the electronic voting system prior to the election. In September of 2018, representatives from KPMG attended the City to perform a variety of tests (commonly called logic & accuracy testing) which involved casting a number of test ballots including one for each election candidate, attempting to cast overvotes and attempting to log in and vote the same credentials a second time. Testing was completed successfully and KPMG confirmed that the results of their testing reflected the test votes as cast by them. After completion of the testing, the electronic voting system was then zeroed to ensure that all candidates had zero votes cast prior to the commencement of the voting period.

Voting Process

The voting period opened on Monday, October 15, 2018 at 10:00 a.m. At this time, voters could begin casting their electronic ballot from their own devices or, if they required additional assistance, could attend one of the City's 14 Voter Help Centres, which were established at all Citizen Service Centres and Libraries during regular business hours.

The online voting platform functioned well during the majority of the voting period.

Voting Platform Slowdown

Between 5:00 p.m. and 6:00 p.m. on Monday, October 22, 2018, Election Officials in electronic voting locations began to notice a slowing of the online voting platform and at the same time calls and emails began coming into the election inbox from the public attempting to vote from their own devices in locations other than those established by the Clerk alerting staff to the same slowdown issue.

As time progressed, the slowdown of the online voting platform continued to progress and worsen resulting in voters experiencing the following:

- Not being able to enter the platform;
- Once entered into the platform being unable to move through the platform to vote as the pages would not load and allow them to progress; and
- Eventual system time-outs.

Information Technology staff located in all of the voting locations immediately alerted their Voting Location Manager as well as their respective Zone Supervisor who in turn reported to Election Headquarter staff once the slowdown of the system began.

Staff stationed in Election Headquarters immediately brought the information regarding the slowdown to Dominion's attention. It became evident that all other municipalities using Dominion's online voting platform were also experiencing the same slowdown issues and system timeouts. As the situation was continuing and Dominion was working to assess and correct the situation, staff remained on a conference call with Dominion and numerous other municipalities with a view to obtaining information to communicate to election officials, electors, candidates and media.

Dominion eventually identified the problem to be a restrictive bandwidth limit placed on incoming traffic for Dominion's data centre by an external internet service provider. It was later determined that the slowdown and timeout issues were caused by a miscommunication between Dominion and the service provider regarding the port bandwidth and the limits placed upon it. The bandwidth requested by Dominion was 1Gbs; however, it was revealed that this was mistakenly taken by the service provider to be the upper potential bandwidth limit not the continuous bandwidth standard. During the slowdown of the system the bandwidth limit was set to only 100 Mbs, which Dominion indicated was approximately only half of the expected peak requirement.

Once the problem was identified, it took until just before 8:00 p.m. to have the bandwidth limit increased to the requirement of 1Gbs. Once the correction to the limit was made to the required level, voting was restored without any further issue.

Extension of Voting Period

At approximately 7:00 p.m., the determination was made by the Clerk to extend the voting period for a full 24 hours by exercising the powers provided for under s.53 (1) of the *Municipal Elections Act 1996*:

“The clerk may declare an emergency if he or she is of the opinion that circumstances have arisen that are likely to prevent the election being conducted in accordance with this Act.”

Notwithstanding that the issues with the electronic voting system had a duration of approximately 2.5 hours, the voting period was subsequently extended through to 8:00 p.m. on Tuesday, October 23, 2018 to ensure that anyone wishing to cast their ballot was provided sufficient opportunity to do so. As soon as the determination to extend the voting period was made, candidates, election officials, media and the general public were advised. Using established communication protocols for election officials, staff at election headquarters were able to quickly schedule election officials and locations for an additional day.

On October 23, 2018, 22 of the 23 voting locations that were used on October 22, 2018 were re-opened and this involved the redeployment of 172 election officials. The additional voting day resulted in direct out-of-pocket costs for the municipality of approximately \$23,000. These are comprised of expenses for part-time and overtime staff wages paid, location rental costs and other minor expenses such as meals. These costs do not include indirect costs such as the cost of salaried staff working as election officials who would have otherwise been performing their regular work duties had the election not been extended or the costs of time in lieu or banked overtime provided to election officials instead of additional pay.

It is important to note that over 8,000 electors took advantage of the extension period to cast their ballot equating to over 15% of the total ballots cast. Upon the close of voting at 8:00 p.m. on October 23, the election results were successfully tabulated and the successful candidates officially declared as elected in the days that followed.

Municipalities were informed by Dominion that the problems which occurred did not affect the integrity of the voting system and that at no time during the slowdown were any security related issues detected or reported nor was the system itself at risk during the slowdown period.

Post-Election Discussions with Vendor

In total approximately 51 municipalities across Ontario were affected by the issues with Dominion's online voting platform. Subsequently, staff from the affected municipalities discussed how to move forward with Dominion. It was proposed that a small group of municipalities lead the discussions with Dominion regarding an appropriate discount or credit resulting from the election night issues.

The City Solicitor and Clerk for the City of Greater Sudbury along with the Manager of Legal & Clerk Services for Innisfil and the City Clerk for Brockton agreed to lead discussions on behalf of the broader group of municipalities. These discussions commenced with an in-person meeting with the Chief Executive Officer for Dominion held at the offices of the Town of Innisfil during the month of November. It should be noted that Dominion demonstrated willingness to engage in discussions and through those discussions acknowledged its responsibility for the election night issues. Without attempting to minimize the election night issues, Dominion officials were

forthcoming and have attempted to work cooperatively and satisfy the concerns of their client municipalities. The small group used the meeting and discussions to convey the gravity and impact that the issues had on the respective municipalities.

Ultimately, the discussions resulted in a final proposal by Dominion to offer a contract price reduction on the services portion of the contracts in the order of 20% to the group of municipalities. For clarity, the reduction does not apply to contract costs for printing of Voter Information Letters or postage. This proposal was communicated to the broader group of municipalities and at the time of writing this report, staff are not aware of any municipalities that have not accepted this contract reduction. Municipalities were free to negotiate further with Dominion should they wish to do so based on costs incurred that may have been in excess of the proposed 20% reduction. This was the case for Greater Sudbury where we had numerous voting locations as a result of our geography.

The services portion of the City's contract with Dominion is for the amount of \$115,842.00 which would have resulted in a credit of approximately \$23,000 based on the 20% credit offered. Additional discussions occurred with Dominion regarding the City's costs incurred and indirect costs of having staff deployed at voting locations for an additional day which resulted in a total credit of \$35,000 (equivalent to 30%) for the City of Greater Sudbury. Moving forward, staff will consider whether any additional steps should be taken under the City's procurement policy regarding Dominion's ability to bid on future bid solicitations.

Voting Period and Locations

Advance Voting Period

Section 43 of the Act stipulates that

Before voting day, each local municipality shall hold an advance vote on one or more dates.

As per the provisions of the Act, a period of advance voting was conducted from Monday, October 15, 2018 at 10:00 a.m. until Election Day on October 22, 2018.

During this period, in addition to voters being able to cast their electronic ballot from devices anytime, anywhere, Voter Help Centres were also established at all 14 of the City's Citizen Services Centres and Libraries for voters who requested additional assistance in casting their electronic ballot. Each Voter Help Centre had dedicated voting booths as well as trained Election Officials to provide assistance to electors as needed. Voter Help Centre locations were open to the public during regular business hours from October 15 to 21, 2018.

Additionally, from Monday, October 15, 2018 to Saturday, October 20, 2018, the Election Bus was used as a Mobile Electronic Voting Location that attended key locations and events throughout the City, such as the New Sudbury Shopping Centre, Health Sciences North, and Keeping Seniors Warm event.

Approximately 57% of ballots cast were cast during the advance voting period prior to Election Day compared to 45% for the 2014 election.

Voting Locations

Subsection 45 (1) of the Act provides the following:

The clerk shall establish the number and location of voting places for an election as he or she considers most convenient for the electors.

The 2018 Municipal and School Board Election offered a variety of physical voting locations where voters could cast their electronic ballot and request assistance. This included Voter Help Centres, the Election Bus, regular Electronic Voting Locations, and Electronic Voting Locations set-up at nursing and long-term care homes.

All but three (3) of the 23 Electronic Election Day voting locations were the same locations as used in 2014. McLeod Public School, Adanac Ski Chalet and LaSalle Secondary School were replaced with the Holiday Inn, Microtel and Carl A. Nesbitt Public School, respectively. All 23 Nursing and Long-Term Care home voting locations were the same as those that have been used since 2006 in compliance with the Act.

In terms of site selection, Clerk's Services staff conducted site visits to each voting location and performed an accessibility audit of each location using an accessibility checklist prior to confirming their use in the election. This was critical in ensuring that each facility had a barrier-free path of travel from the parking lot and sidewalk, barrier-free path of travel inside the voting location, barrier-free parking, door operators or accessible doors, adequate lighting, and adequate slope and surface.

Due to the vote anywhere model adopted by the Clerk, voters were able to vote at any of these locations, regardless of the Ward they reside in. It should also be emphasized that free transit was available on Election Day for anyone wishing to attend an Electronic Voting Location.

The percentage breakdown of total ballots cast by location is as follows:

- 4.97% cast at Voter Help Centres;
- 0.25% cast on the Election Bus;
- 1.37% cast at Nursing and Long-Term Care Homes; and
- 11.62% cast at Election Day Electronic Voting Locations.

Voter Experience

Assistance for Electors

While there were many voters who enjoyed the convenience of electronic voting and had no issue using the online voting platform to cast their ballot, a number of electors did require additional assistance as they may not have been as comfortable using the online voting platform and electronic devices to cast their ballot.

For clarity, processes to assist electors are in place for every municipal election. To that end, every effort was made by the Election Team to ensure that anyone who wanted to cast a ballot was able to do so. A number of initiatives to help voters with the platform and technology were put into place such as: the establishment of Voter Help Centres, outreach presentations, registration days, the Election Bus, establishment of in-person voting locations on Election Day

at 23 Nursing and Long-Term Care facilities specifically for residents of those sites and the use of the 23 voting locations throughout the City as previously used in the 2014 Municipal and School Board Election.

Following the election an analysis of voting statistics was conducted and it was found that 81.79% of all ballots cast during the voting period were cast independently in a location other than at an established election period voting location.

While the majority of voters were able to cast their ballot without assistance, some required support and as such attended an election period voting location. Many voters who attended at those locations were those who were unfamiliar or uncomfortable with the technology and unsure of how to navigate the online voting platform. All election period voting locations were staffed with election officials comprised of City of Greater Sudbury employees to provide assistance and support to any voter who required it.

Despite assistance and support offered, some voters remained steadfast in their dislike of the online voting platform and wished to see a return to the traditional paper ballot method. However, it should be noted that a number of those who attended an election period voting location who were initially opposed to the idea of voting online left satisfied with the method and of the opinion that the system was actually quite easy to use.

Comments Received

As this was the first fully electronic election staff felt that it was important to allow the public a chance to provide feedback on their experiences using the method. Comment boxes were placed in all election period voting locations and voters were also encouraged to send any questions, comments or concerns to election@greatersudbury.ca.

Following the election, all comments received were reviewed by staff and logged into a spreadsheet. Upon review of the comments, it was found that a general theme emerged amongst the types of comments received in the comment boxes in voting locations, which was an overall dislike of having to vote online on a computer or tablet and a wish to return to a paper ballot method or a hybrid model. In contrast, many of the comments that were sent to the election email were of a more positive nature regarding the method and the process.

Positive feedback was received from a number of voters. Some voters who provided feedback indicated that were it not for the ability to cast a ballot online at any time of day from anywhere including from other provinces or countries, they would not have been able to vote in the election due to work or travel commitments that prevented them from being in Greater Sudbury during the voting period.

These comments will assist with the planning phases of the 2022 Municipal and School Board Election.

Staffing and Training

In order to staff all aspects of the revision and voting period of the 2018 Municipal and School Board Election, 410 City employees were required and recruited.

The decision to use city staff as the sole source of Election Officials was made for a number of reasons. City staff are required to take and have been provided with training in customer service, accessibility, WHMIS, health and safety etc, which cut down on additional training requirements as outside workers would have been required to receive this training in addition to election specific training.

Election Official training was provided over a period of four weeks in three hour sessions. Training consisted of a classroom style presentation, demonstrations of voters' list management software and the electronic voting system, and a hands-on voting location simulation. A voters' list management software training database was provided up until Election Day so that Election Officials could practice making changes to elector information in a test environment ahead of their working in a location and an election official manual containing all Election Day information was provided.

Next Steps

Planning for the 2022 Municipal and School Board Election begins immediately. The information and statistics collected during and after the 2018 election as well as election trends and technologies used in other jurisdictions will be monitored and taken into consideration during the planning phases for the 2022 Municipal and School Board Election. In 2020, staff will bring forward a report recommending the method(s) of vote for the next municipal election for Council's consideration and approval. Such method(s) should provide electors with confidence in the voting process and results and should be convenient and accessible for all electors in Greater Sudbury. Once the election method(s) has been selected for 2022, staff will conduct a procurement process in accordance with the City's procurement policy.
